Is This Audit Right for Your Business?

CTO / Head of IT

Pain Points: Constant system crashes, slow software, and an ever-growing list of tech issues that pull your small team away from core tasks and stifle growth.

Our Solution:
Our audit provides a clear roadmap to identify critical tech issues, prioritize fixes, and streamline your small business's operations, saving valuable time and reducing IT headaches.

CFO / Finance Manager

Pain Points: Unexpected IT costs eating into your budget, expensive software licenses, and wondering if your tech investments are actually paying off for your small business.

Our Solution:

Our audit uncovers hidden IT spending, identifies cost-saving opportunities, and helps you make smarter tech investments, ensuring every euro spent delivers real value.

CEO / Business Owner

Pain Points: Struggling to launch new features quickly, losing customers to more agile competitors, and feeling stuck with outdated technology that limits your small business's potential.

Our Solution:

Audit pinpoints technical roadblocks that hinder your business's growth, giving you actionable insights to innovate faster and reclaim your competitive edge in the market.

Key Components of the Audit

Our comprehensive assessment examines six critical dimensions of your legacy system, providing a 360-degree view of opportunities and risks.

Business Value Audit

How well the system supports current goals and future growth.

Technical Audit

Code quality, architecture, outdated tech stacks (e.g., COBOL, old Java), and system dependencies.

Security Audit

Identifying vulnerabilities, data leakage risks, and compliance gaps (GDPR, CCPA).

Functionality Audit

Assessing if features meet market needs and internal user requirements.

Operational Risk Assessment

Risks from maintenance, support, and potential system failures.

Cost Analysis

Comparing ongoing maintenance costs vs. modernization investment.

Action Plan

Prioritized recommendations, quick wins, and modernization roadmap.

Technical Audit Details

System Analysis

Tech Stack Review: A complete review of your current technologies, libraries, and third-party tools.

Dependency Mapping: Identification of critical system dependencies.

Code Quality Check: Assessment of code health, identifying technical debt and areas for improvement.

Risk Identification

Security Vulnerabilities: Uncovering potential threats and weaknesses in your system.

Compliance Gaps: Pinpointing any areas where industry standards are not met.

Critical Failure Points: Highlighting key areas that pose significant risk and require immediate attention.

Business Details

Cost Breakdown

A comparison of current system maintenance costs versus modernization investment.

Team Productivity Assessment

Identification of where time is lost, including development bottlenecks and onboarding challenges.

ROI Calculation

Projection of savings and efficiency gains from modernization efforts.

Your Actionable Roadmap

This final phase translates insights into clear, practical next steps. We develop a comprehensive modernization plan, detailing prioritized actions, recommended strategies, and a realistic timeline to achieve your business goals.

Prioritized Action Items

A clear list of tasks, ranked by their potential impact, required effort, and mitigation of risks, ensuring focus on what matters most.

Implementation Timeline

A practical 3-12 month plan outlining key milestones, necessary resources, and measurable success metrics to track progress.

1　　　　　　**2**　　　　　　**3**

Recommended Approach

We define the most effective strategy for your unique situation, whether it's optimizing current systems, evolving them gradually, or undergoing a complete transformation.

Complete Audit Deliverables Package

1 **Technical Health Report**

System assessment with risk ratings and critical issues, highlighting vulnerabilities, outdated dependencies, and areas requiring immediate attention.

2 **Cost Analysis Document**

Current vs future state financial comparison, including potential savings post-modernization, reduced cloud costs, and lower maintenance expenses.

3 **Modernization Roadmap**

Step-by-step action plan with timeline and budget estimates, and resource allocation recommendations for 6-18 months.

4 **Strategy Session**

Walkthrough of findings and Q&A with our architect, providing direct insights and clarifying next steps for your modernization journey.

How to Know If You Need This Audit

These criteria serve as a self-assessment for prospects, helping them identify if our audit services can address their legacy system challenges and demonstrating our expertise.

Developer onboarding takes more than 2 weeks

(indicates complexity and documentation issues)

System failures are hard to diagnose

(reveals technical debt and knowledge gaps)

Most budget goes to maintenance, not innovation

(signals modernization ROI opportunity)

Complete Audit Package

Transparent Pricing

€950 flat fee, no hidden costs. Includes all technical analysis, business assessment, and strategic recommendations.

Fast Turnaround

Complete assessment delivered within 2 weeks. Minimal disruption to your team, just 3-4 hours of interviews required.

Risk-Free Investment

If findings don't reveal at least €5,000 in potential savings or efficiency gains, we'll refund 50% of the audit cost.

Ready to Get Started?

Transform your legacy system from a liability into a competitive advantage. Our €950 audit provides the clarity and roadmap you need to make confident modernization decisions.

Schedule Discovery Call

30-minute conversation to understand your system and challenges (no commitment required)

Receive Proposal

Customized audit scope and timeline based on your specific needs

Get Your Roadmap

Complete assessment delivered in 2 weeks with actionable recommendations
